Dynasound Honored with Product Performance Solutions Award at NeoCon

Norcross, Georgia: Dynasound, Inc.'s Cylindrical Pendant Mount Masker was a recent recipient of *Buildings* and *Buildings Interiors* magazines Innovations Awards in the Product Performance Solutions Category.

Building's and *Buildings Interiors* magazines Innovations Awards, Product Performance Solutions, is presented to the product or service with the unique capability of solving today's performance and "ease of use facility" issues.

Ceiling View (Top of speaker)

Tom Koenig, President of Dynasound, Inc., described the award as a prestigious honor. "We were very pleased to accept our award from *Buildings* and *Buildings Interiors* magazines. It represents the spirit of innovation and original thinking that is critical to meeting the changing industry requirements for sound masking solutions. It separates Dynasound from its competitors."

"The DS1337 Cylindrical Pendant Mount Masker was designed for highly visual applications in facilities without ceiling plenums," Koenig said. After the installation, the assembly is *visible* and sound distribution within the area is very uniform. The unit can be used for any application requiring sound uniformity, such as masking sound, paging and music systems.

Koenig continued, "Design parameters lead Dynasound to develop the industry's first pendant-mounted sound masking speaker. The speaker incorporates a non-penetrated enclosure that uses Dynasound's new WhisperWave™ technology. The technology maximizes speech privacy and emits an enhanced new sound. The unit also features single-point suspension and a regressed diffuser to conceal cable termination and volume control."

Dynasound, Inc. manufactures the world's largest line of sound masking equipment for use in commercial, defense, government, healthcare and military facilities. Learn more at 800 989 6275 or www.dynasound.com.
